

# A new way of self drive with BrainLink

- Brain sharing
- Cloud drivers control the vehicle
- Multiple driver per vehicle
- Block chain based machism to avoid wrong operation
- Maximum to utilize global human brain power
- New eco-system to empower the world

# BrainLink Drive – how it works

- Running vehicle captures 360 degree video and send to cloud
- Multiple cloud drivers monitor the vehicle surrounds and operate the vehicle accordingly (realistic view)
- Vehicle only be controlled with the same operation(left/right/brake/accelerate) in the session, not the different one
- Driver with same operation in the driving session will get points
- If one cloud driver's operation is different from others, his points will be decreased
- Multiple point decrease will remove the driver from the driving session
- Points can be changed to money
- Driver doesn't know whom he is driving for and together with to avoid fraud
- Owner can pay points he got to system to get this service
- Car Manufactures give owner some amount of points when sell the vehicle
- Car use radar to help slow down when objects is ahead
